

# tinySA Basic and Ultra Firmware Update; using STM32CubeProgrammer

## 2024-01-18 actualized version

**DISCLAIMER:** The original procedure was developed by Don Wines, K5DW for his personal use. It is freely provided for use by anyone else but NO liability will be assumed by Don Wines for any damage, real or otherwise, caused by use of this procedure. If you cannot agree to this, please do not use this procedure. This procedure was developed in Windows 10.

**Step 1.** Download and install STM32CubeProgrammer from here:

<https://www.st.com/en/development-tools/stm32cubeprog.html>

(Available installers for Linux, Mac, Win32 and Win64... Current version: 2.15.0)

**Step 2.** Download latest firmware:

- for the **tinySA Basic** (screen size: 2.8 inch) from here:

<http://athome.kaashoek.com/tinySA/DFU/>

- for the **tinySA Ultra** (screen size: 4 inch) from here:

<http://athome.kaashoek.com/tinySA4/DFU/>

... be sure to select the \*.bin-file.

For example: tinySA4\_v1.4-146-g8cee2cc.bin

## Index of /tinySA4/DFU

Apache/2.4.10 (Debian) Server at athome.kaashoek.com Port 80

Save the file to a folder of your choice.

# tinySA Basic and Ultra Firmware Update; using STM32CubeProgrammer 2024-01-18 actualized version

**Step 3.** Launch the STM32CubeProgrammer. It should look similar to this:

**Step 4.** Connect Your tinySA to Your computer, power it up, and put it into DFU mode:

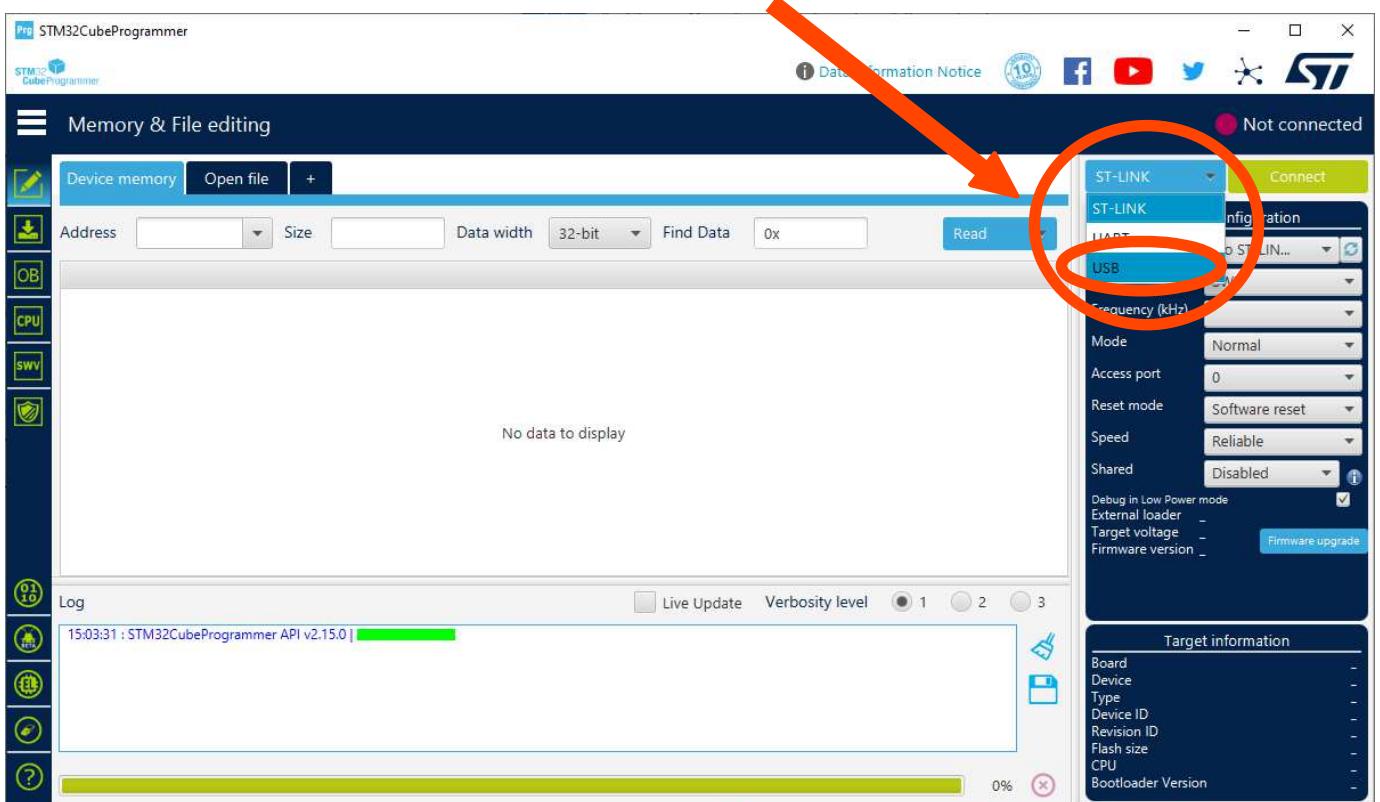

*CONFIG > DFU > ENTER DFU*

tinySA Ultra: push Jog button during switch “on” (the display remains black)

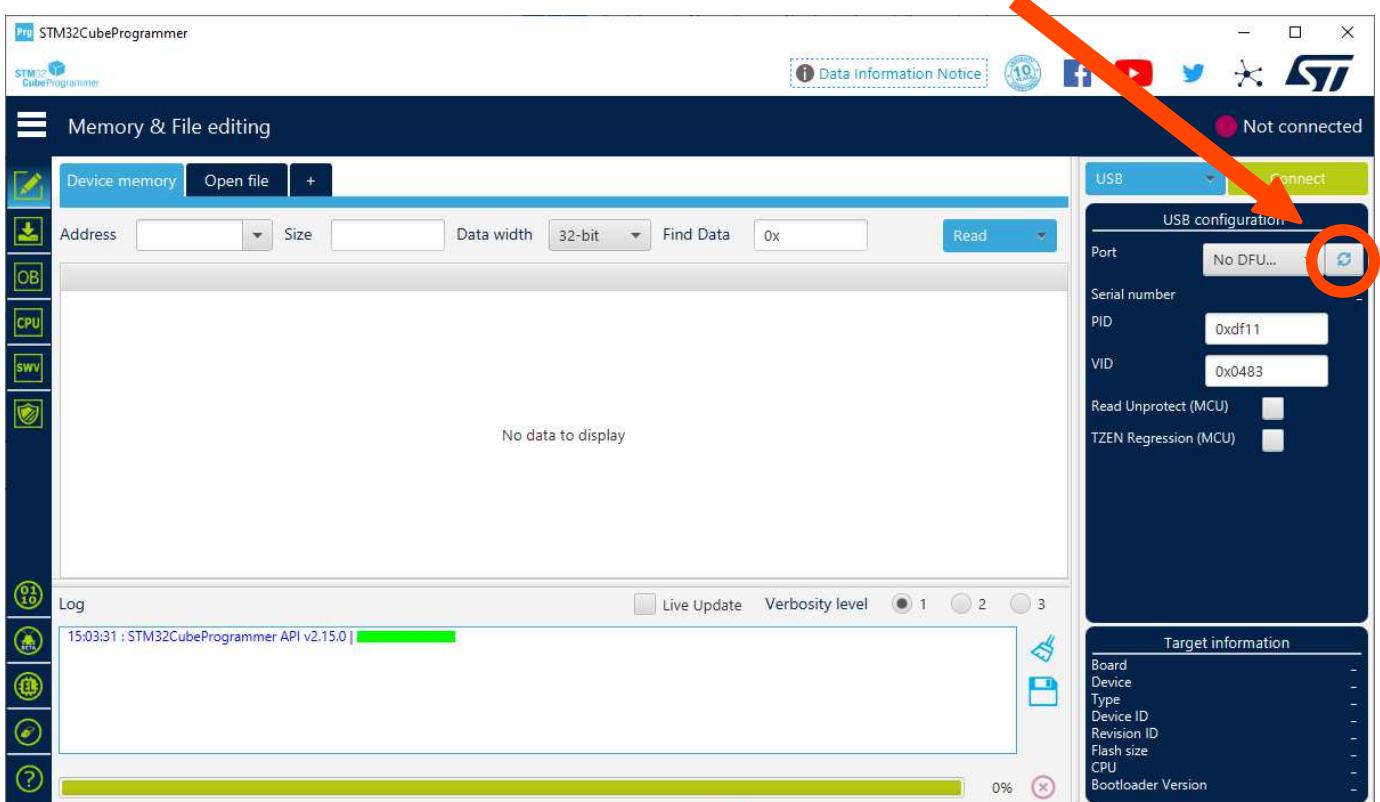

# tinySA Basic and Ultra Firmware Update; using STM32CubeProgrammer

2024-01-18 actualized version

**Step 5.** In the STM32CubeProgrammer select “USB” from the dropdown-list here:

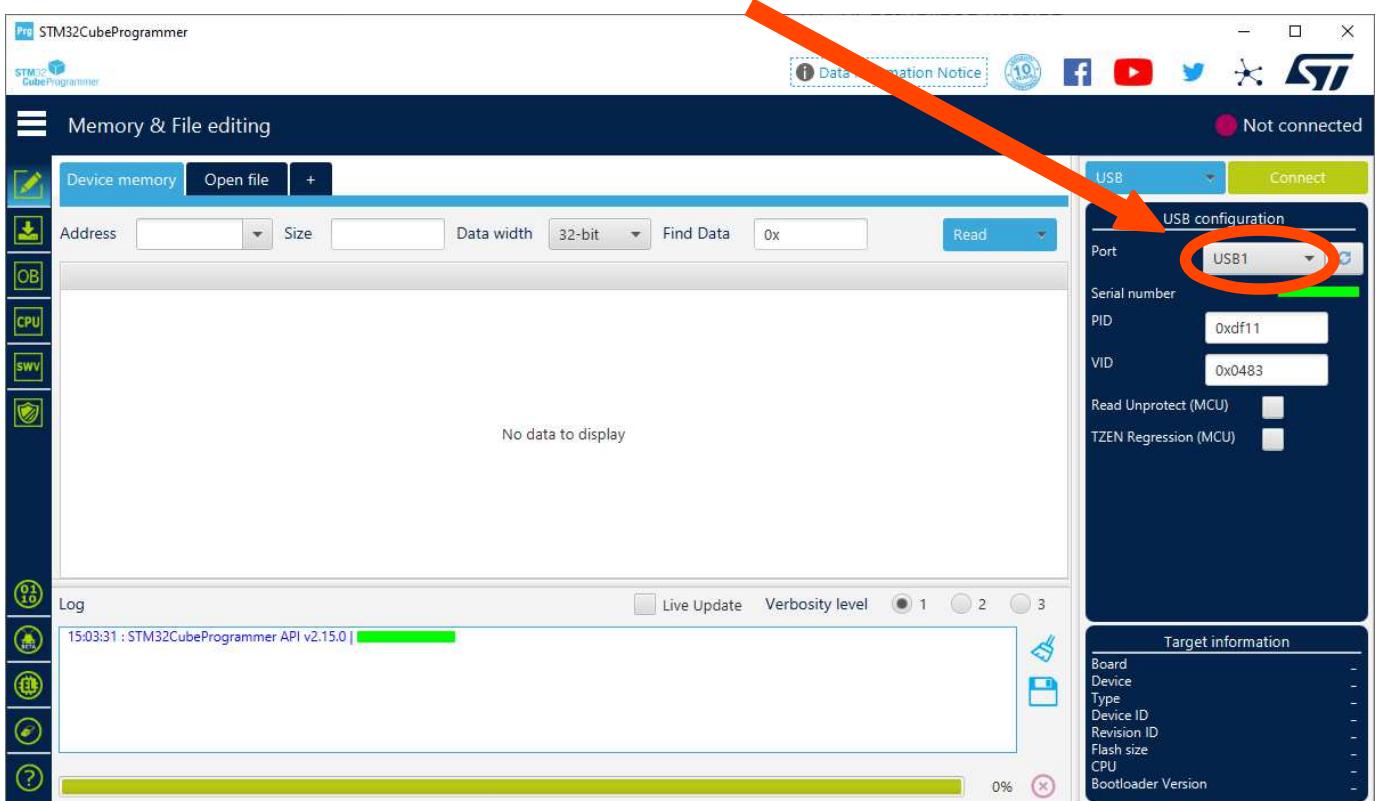

- If the Port-selector says; “No DFU...” ( No DFU detected) click the “Refresh” button.

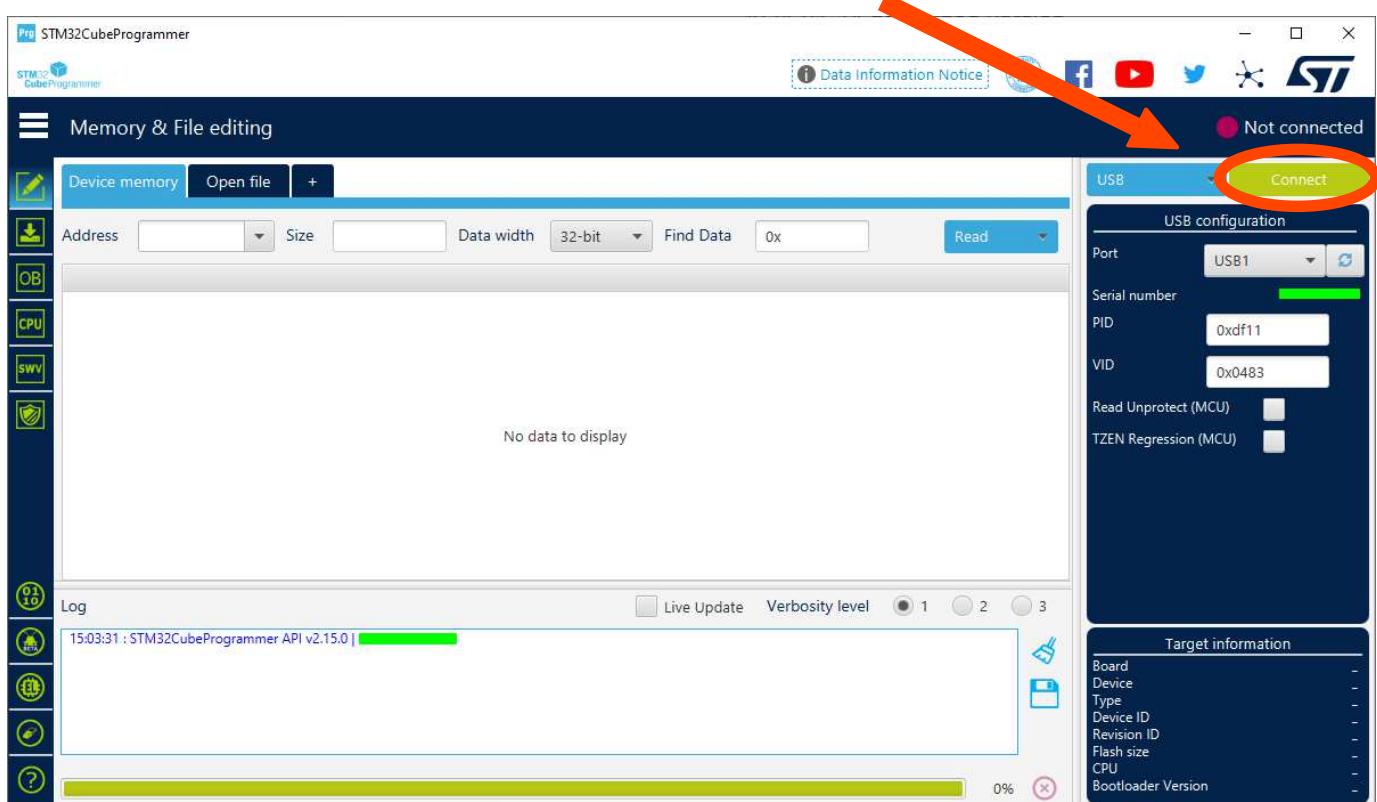

# tinySA Basic and Ultra Firmware Update; using STM32CubeProgrammer

2024-01-18 actualized version

The “Port” selector should change to “USB1” or similar:

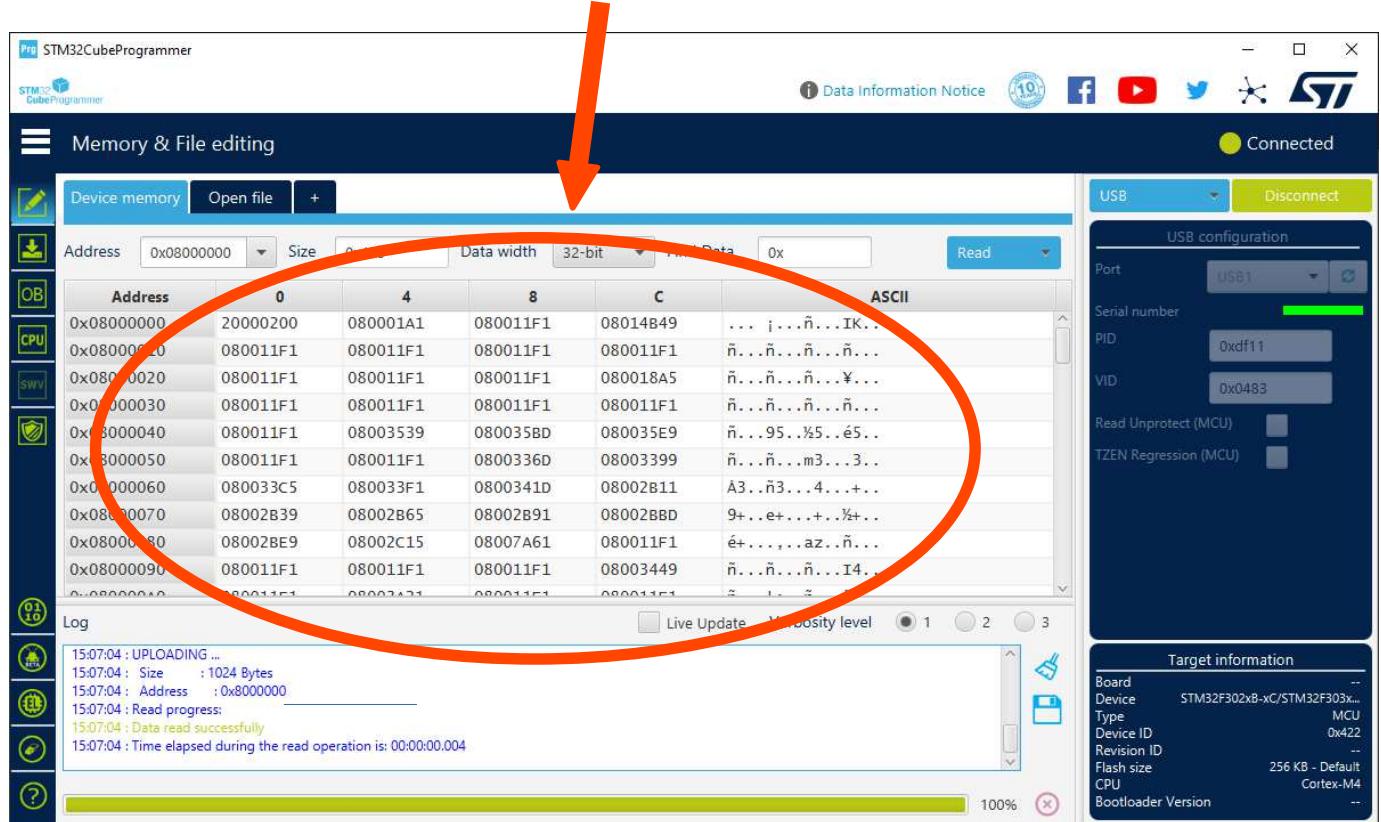

**Step 6.** Connect to the tinySA by clicking the “Connect” button.

# tinySA Basic and Ultra Firmware Update; using STM32CubeProgrammer

2024-01-18 actualized version

The program should connect to the tinySA and display the current contents of the TinySA's memory:

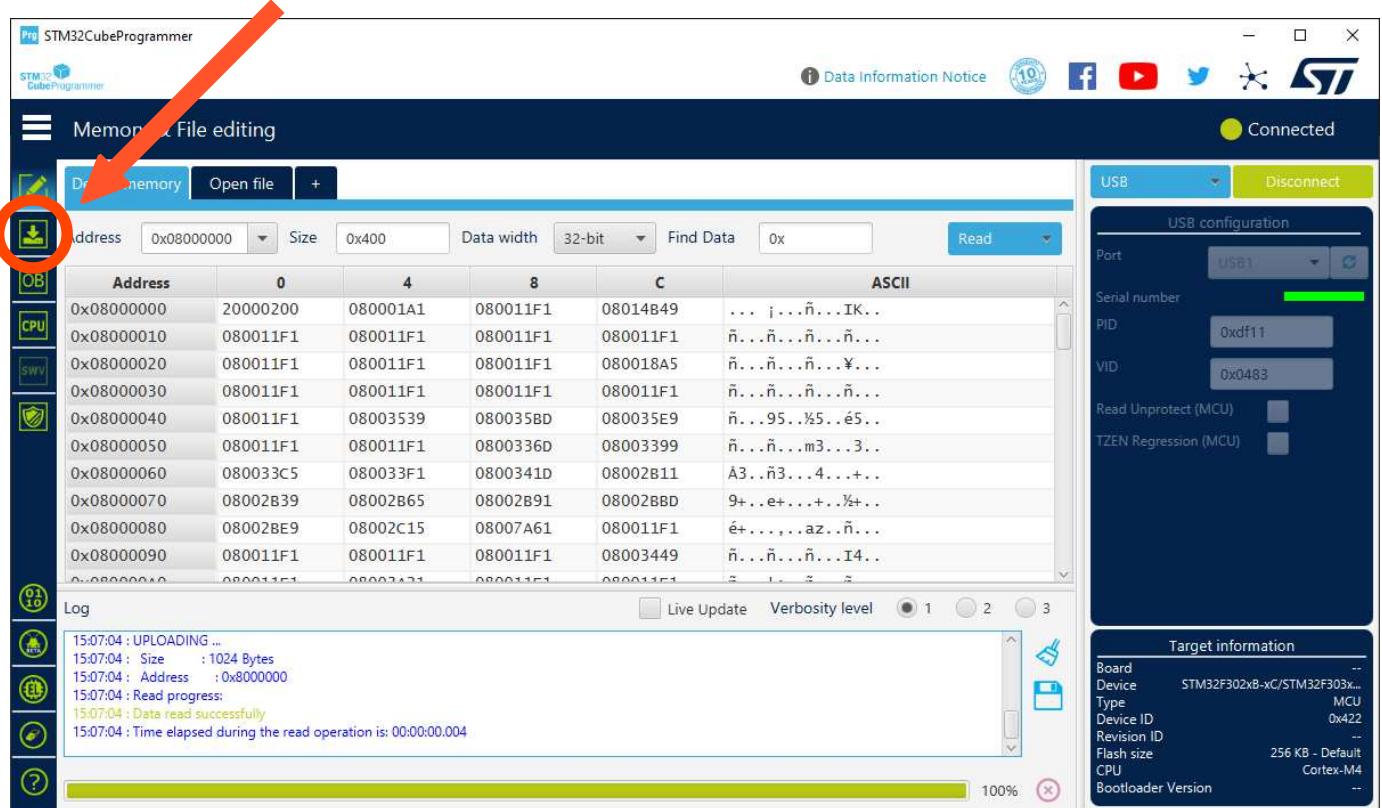

(If the data doesn't display immediately, click the "Read" button and the memory data should then display.)

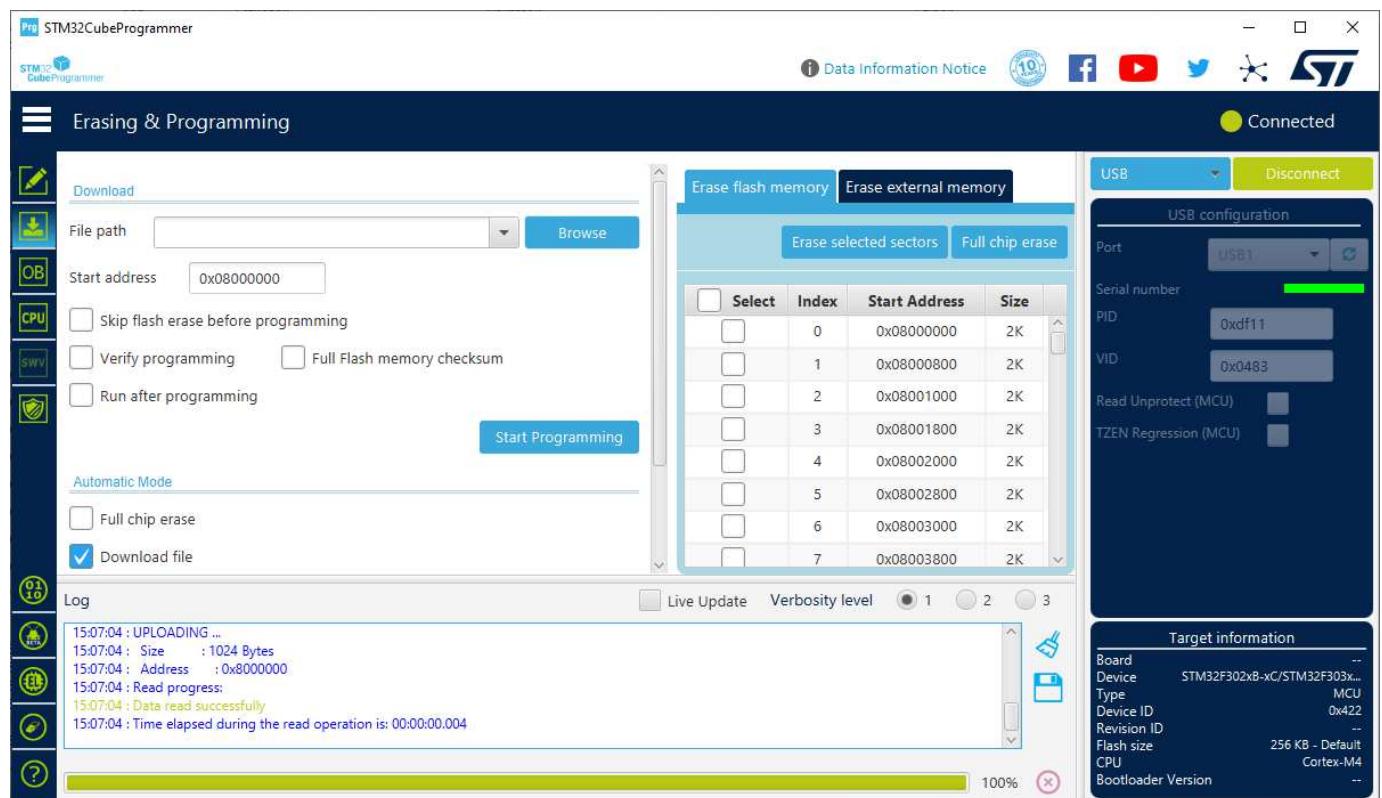

# tinySA Basic and Ultra Firmware Update; using STM32CubeProgrammer

## 2024-01-18 actualized version

### Step 7. Click on the “Erasing & Programming” icon:

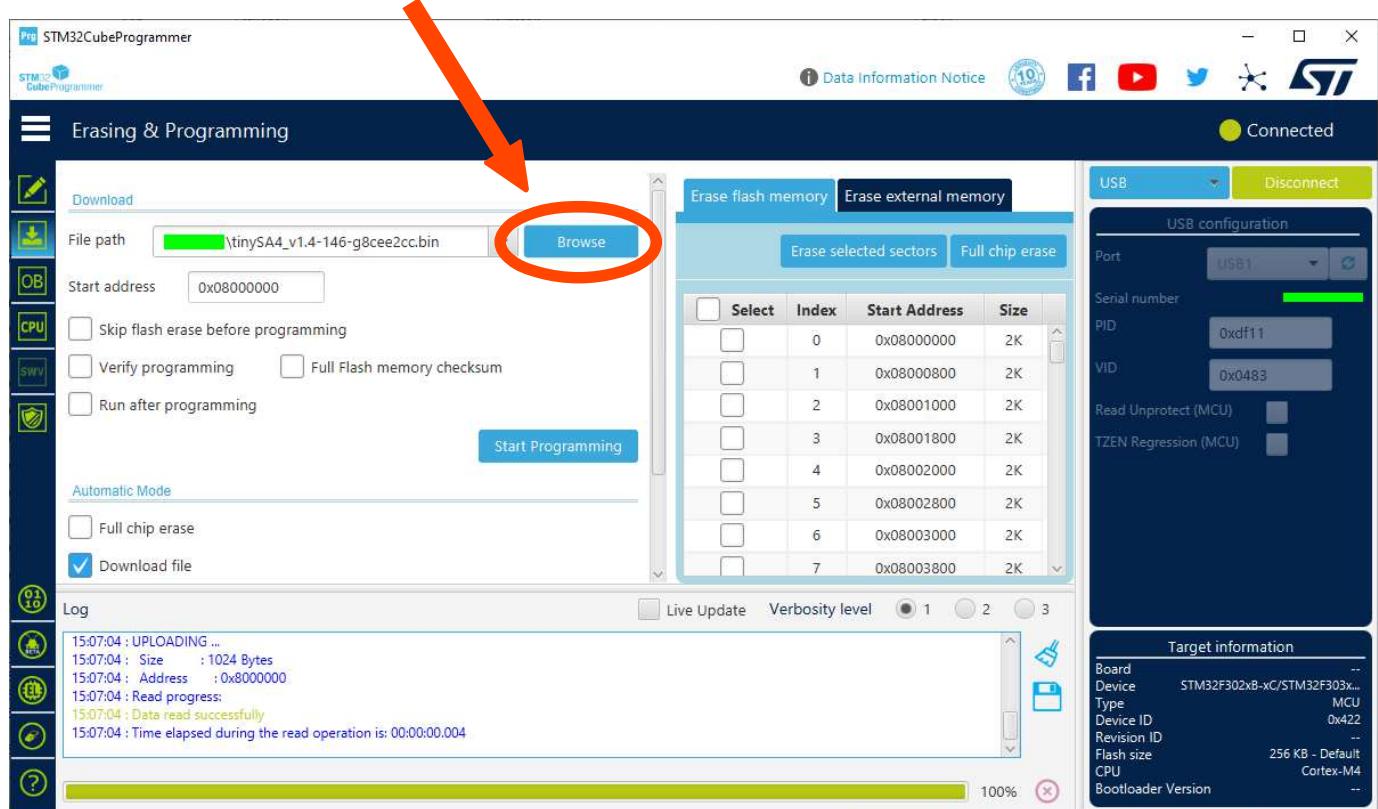

You should be presented with this screen:

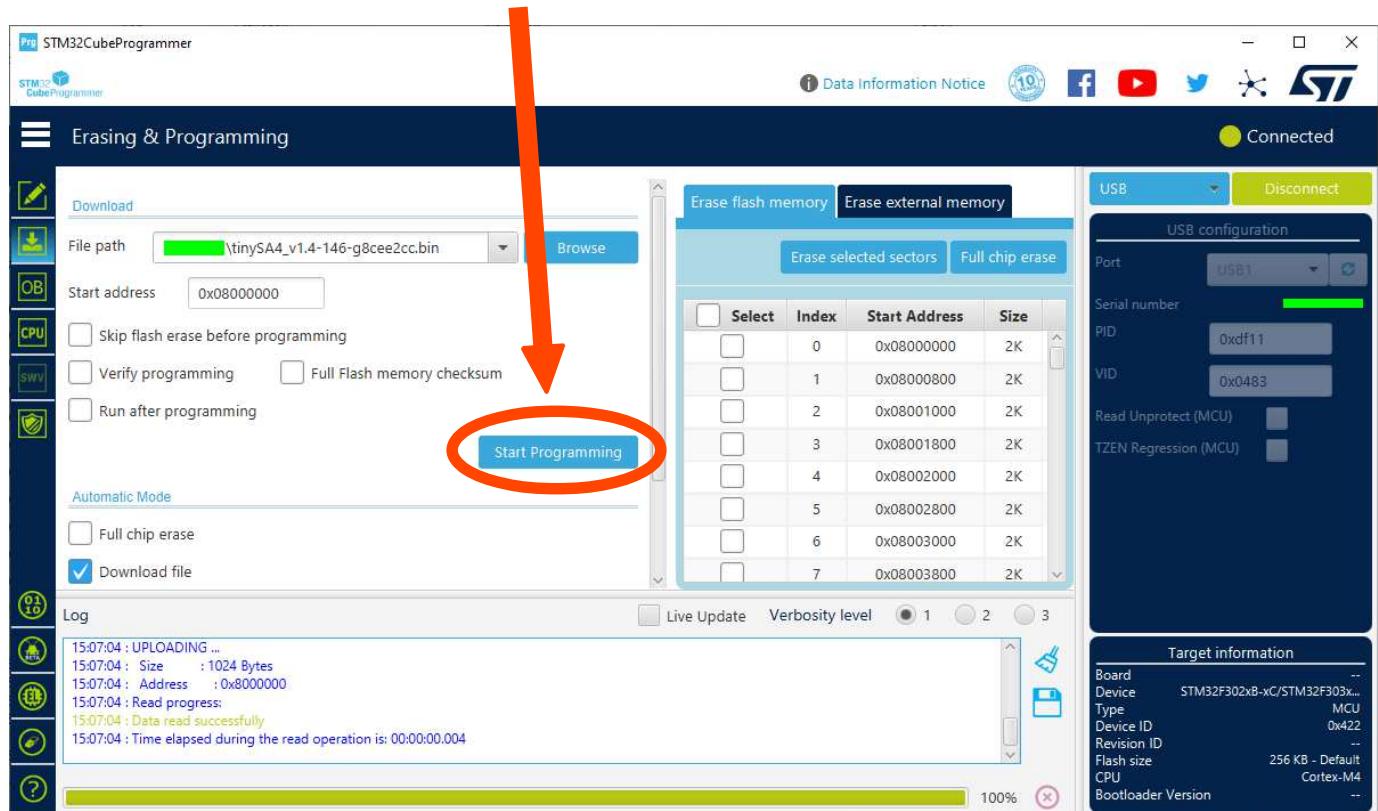

# tinySA Basic and Ultra Firmware Update; using STM32CubeProgrammer

2024-01-18 actualized version

**Step 8.** Click the “Browse” button and navigate to the \*.bin firmware-file You saved earlier.

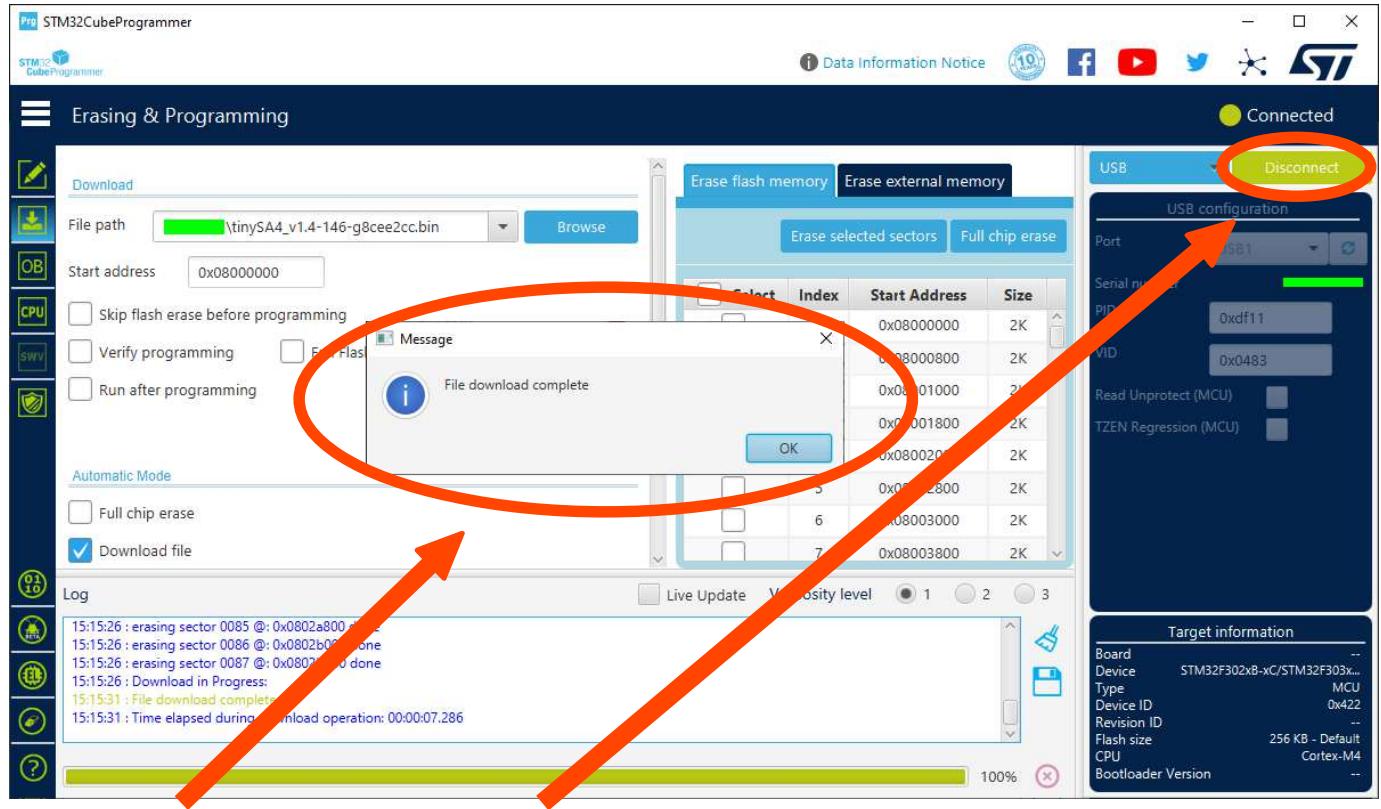

**Step 9.** Now click the “Start Programming” button to initiate the file download to the tinySA:

# tinySA Basic and Ultra Firmware Update; using STM32CubeProgrammer

2024-01-18 actualized version

After a few seconds the download will complete and you will be presented with this screen:

Click “Ok”, and “Disconnect” button.

**Step 10.** Now power cycle the tinySA and check the firmware version on Your tinySA:

*CONFIG > VERSION*

And You are done!
